

BLYTH COMMUNITY COLLEGE

This project involved the design and installation of a 3G Mid Pile carpet pitch for use as a hockey and football pitch.

M Design prepared feasibility studies for two options for the college as the proposed pitch had an impact on existing hardstanding areas within the school used for parking. The larger pitch option was the one taken up and **M Design** prepared all the detailed design package.

This included:

- 3D Level and Earthwork Design
- Drainage Design for pitches including connecting to existing sewer network
- Pitch Marking Schedule and drawings
- Layout of pitches to maximize number on site
- Isometric drawings to visualize the proposals
- Construction details of pitch including drainage and carpet specification

M Design have developed a strong portfolio of pitch and sporting facility design. The team of in house engineers and architectural designers can take any scheme of a similar nature through from conception to implementation, helping with grant funding along the way!
